

2002 Arizona School Health Education Profiles

Summary Tables

The School Health Education Profile includes two questionnaires, one for school principals and one for lead health education teachers. The principal's questionnaire examines health education from an administrative perspective, while the lead health education teacher's questionnaire looks at health education from an instructional perspective. The Arizona Department of Education mailed these two questionnaires to 378 public schools containing any of grades 6 through 12 in Arizona in the spring of 2002. Usable questionnaires were received from 345 principals and from 329 teachers. A total of 91 Charter schools have been identified as responding to the questionnaires, 91 charters for the principals and 86 charters for the teachers.

The tables included for each of the questions will reflect **Response** column which is the possible responses to the question, the **Question** column identifies the question number and corresponding response, **MS, Jr/Sr, HS and Overall** columns identifies the percent of observations in each response category and the range of the confidence interval. The Confidence interval is 95%.

Response rate for the Principal portion of the questionnaire is 91% usable questionnaires received from 345 out of 378 sampled eligible principals. The Lead Health Education Teacher response rate is 87% from 329 out of 378 sampled eligible teachers.

Principal Summary

According to key highlights, 68 percent of schools require health education for students in any of grades 6 through 12.

Of the 68 percent, which require health education to students, 54 percent require at least one health education course.

Physical education is a requirement for students in any of grades 6 through 12 in 76 percent of the responding school.

99 percent of schools responding to the survey have adopted a policy prohibiting cigarette smoking by students.

In comparison, 96 percent have adopted a policy prohibiting cigarette smoking by faculty and staff.

Students can purchase snack foods or beverages from vending machines or at the school store, canteen, or snack bar in 82 percent of the schools responding.

Lead Health Education Teacher Summary

95 percent, of the schools that have a required health education course, have tried to increase student knowledge on nutrition and dietary behavior.

98 percent, of the schools that have a required health education course, have tried to increase student knowledge on physical activity and fitness.

Of schools that have a required health education course, 100 percent that tried to increase student knowledge on tobacco use prevention.
